

# Automating Requirements Management

**Karl Wieggers**

Thank you for your interest in this article. However, the original article from 1999 is out of date and so I have removed it from ProcessImpact.com. I apologize for the inconvenience. Tools, their features, and their vendors change frequently.

A useful source of current information about available requirements management tools is the “Seilevel Requirements Management Tool Evaluation Report,” which is updated periodically. Also, the “Seilevel Requirements Management Tool Scorecard” provides a great deal of information about the features of more than 20 requirements management tools. Both of these items can be downloaded from <https://www.seilevel.com/business-analyst-resources/requirements-tools-reviews/>.
